1. Medallion Layer Comparison — Bronze, Silver & Gold
2. Layer Workflow — Analysing, Coding, Validating & Documentation
3. Source System Interview — Business Context & Extract/Load

1. Medallion Layer Comparison

Bronze | Silver | Gold — Definitions, Load Methods & Transformations

	 Bronze Layer	 Silver Layer	 Gold Layer
Definition	Raw, unprocessed data as-is from sources	Clean & standardized data	Business-Ready data
Objective	Traceability & Debugging	(Intermediate Layer) Prepare Data for Analysis	Provide data to be consumed for reporting & Analytics
Object Type	Tables	Tables	Views
Load Method	Full Load (Truncate & Insert)	Full Load (Truncate & Insert)	None
Data Transformation	None (as-is)	- Data Cleaning - Data Standardization - Data Normalization - Derived Columns - Data Enrichment	- Data Integration - Data Aggregation - Business Logic & Rules
Data Modeling	None (as-is)	None (as-is)	- Star Schema - Aggregated Objects - Flat Tables
Target Audience	- Data Engineers	- Data Analysts - Data Engineers	- Data Analysts - Business Users

2. Layer Workflow

Bronze | Silver | Gold — Step-by-Step Process Flow

3. Source System Interview

Business Context & Ownership | Architecture | Extract & Load

Source System Interview

Business Context & Ownership

Who **owns** the **data**?

What **Business Process** it supports?

System & Data **documentation**

Data **Model** & Data **Catalog**

Architecture & Technology Stack

How is data **stored**?
(SQL Server, Oracle, AWS, Azure, ...)

What are the **integration capabilities**?
(API, Kafka, File Extract, Direct DB, ...)

Extract & Load

Incremental vs. **Full Loads** ?

Data **Scope** & **Historical** Needs

What is the expected **size** of the **extracts**?

Are there any data **volume limitations**?

How to **avoid impacting** the source
system's **performance**?

authentication and **authorization**
(tokens, SSH keys, VPN, IP whitelisting, ...)
